PSD Eye feels quite and works flawlessly for me, especially handling complex scenes, such as those with a lot of layers. I don’t know of another product that boasts the same (or better) level of ergonomics and performance. For starters, PSD Eye is able to perform multi-layer edit operations faster than the PS slice tool. The PSD Eye tool tip is not as smart as Lightroom’s. This is a minor issue for me, but still one that should immediately be addressed. It is also much more user-friendly than the Photoshop Element plugin. Not only does the PSD eye tool point out what’s in the active layer, but it also shows where all the elements in the active layer are located—a great feature for when you want to see exactly where a complex edit is applied. The tool also has a special function for quick layout control, while also providing a powerful object selection box as well as convenient, easy-to-use fills and the ability to easily edit a group of pixels. For a tool that’s often used to pretty up photos, PSD Eye delivers more features than most other products. It may have specific coverage areas with its AI edits, but overall the tool is more polished than many PhotoShop Express plugins.
