Adobe becomes the first vendor to demonstrate Adobe Sensei, a new breakthrough AI product that automates the work of image recognition and suggested features. With Adobe Sensei for Photoshop and Live, users applying spot edits to images receive a real time preview of the effects as they're applied. The product becomes an exciting new image editing feature for photographers, but the new technology gives users much more flexibility than just replacing stock text. For example, with Adobe Live, the first time you use a tool on an image, the application adds those features as suggested edits. The product uses AI to expand the Express function, a power-user feature included in Adobe's consumer photo editor, but only if the tool is able to identify a model. As a result, the assistant gets better at anticipating which elements you'd like to alter or replace. Adobe Sensei for Photoshop will appear as an update for professional customers when it becomes available in fall 2019. First, users have the ability to alter perspective and lighting in real-time using new in-camera LUTs.
